“La experiencia, nuestro principal valor”

ENERGETIC POLITICS

Letter Engineers aware of the need to reduce energy consumption and achieve improved energy efficiency, with the contribution also towards the Environment, establishes its Energy Management Policy as a framework in which professionals should develop their activities, advancing in the way of improving their energy performance. Letter Engineers has equipment, computer tools and a work methodology that together with a highly qualified and experienced staff make possible the analysis of the energy consumption and the evaluation of the optimal consumption. That allows satisfying the same common needs with less energy consumption, thus achieving considerable savings and greater energy efficiency. The Management of Letter Engineers is committed to achieving an improved energy performance by acquiring the following commitments:

- Acquire the commitment to continuous improvement of energy performance.
- Encourage the consistent use of energy in Letter Engineers through savings techniques in their facilities.
- Communicate the Energy Policy to professional as well as make it public externally.
- Provide the reference framework to establish and review the energy goals and targets.
- Implement technologies and improve existing ones to consume energy in facilities more efficiently.
- Comply with the energy legislation applicable at all times and, as far as possible, anticipate the legal provisions of future appearance.
- Support the purchase of efficient products and services and energy design in order to improve energy efficiency.
- Reduction of the energy consumption of Letter Engineers in its facilities.
